Global Olympic Sports Performance Analysis

1. Introduction

This project analyzes Olympic Games data using Tableau. It helps understand sports participation, medal distribution, and participation by country.

2. Objectives

- To analyze Olympic medal distribution.
- To compare participation in different sports.
- To analyze participation by country.
- To create an interactive dashboard.

3. Dataset

The project uses Olympic athlete event data containing athlete IDs, names, sports, countries, years, and medals.

4. Tools Used

- Tableau Desktop
- CSV dataset
- GitHub

5. Methodology

1. Collected the Olympic dataset.
2. Connected the dataset to Tableau.
3. Prepared the data for analysis.
4. Created charts for medal analysis, sports participation, and country participation.
5. Combined the charts into an interactive dashboard.

6. Results

The dashboard displays medal distribution, participation across sports, and participation by country. Filters allow users to explore the data.

7. Conclusion

This project shows how Tableau can convert Olympic data into useful visualizations and make data analysis easier.

8. Future Scope

More filters, year-wise comparisons, and detailed athlete performance analysis can be added in the future.
