# Problem-Solution fit canvas 2.0

Purpose / Vision: Global Olympic Sports Performance Analysis
Team ID: EN25CS3011097 | Date: 01-11-2026

SMARTBRIDGE Let's Bridge the Gap
SKILL WALLET A SmartBridge Product

Define CS, fit into CC

### 1. CUSTOMER SEGMENT(S) — CS

- Sports analysts and performance coaches
- National Olympic Committees and sports federations
- Sports journalists and data storytellers
- Students, researchers and sports enthusiasts

### 6. CUSTOMER CONSTRAINTS — CC

- Limited data analysis or programming skills
- Raw data scattered across many sources and formats
- Limited budget for paid analytics tools
- Time pressure before events and reporting deadlines
- Inconsistent historical data (changing sports, events, country names)

### 5. AVAILABLE SOLUTIONS — AS

- Olympics.com and Wikipedia medal tables (static, limited analysis)
- Raw datasets on Kaggle (need technical skills)
- Generic spreadsheets and manual comparison
- Sports news articles (opinion-based, not interactive)
- Pros: free and easy to access. Cons: fragmented, no deep insights, hard to compare across Games

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

### 2. JOBS-TO-BE-DONE / PROBLEMS — J&P

- Understand how countries and athletes perform across Olympic Games over time
- Compare medal tallies, sport-wise strengths and participation trends
- Identify factors (age, gender, sport, host country) that influence performance
- Find talent gaps and sports where a country can improve its medal chances

### 9. PROBLEM ROOT CAUSE — RC

- Olympic data is huge, spread across sources and not standardised
- No simple, interactive tools that turn raw data into clear insights
- Decisions are often made on gut feeling instead of evidence
- Analysis needs technical skills most stakeholders do not have

### 7. BEHAVIOUR — BE

- Search for medal tables and athlete stats online after each Games
- Download datasets and compare them manually in Excel
- Follow sports news, social media and federation reports
- Rely on past experience and intuition when evidence is hard to get

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

### 3. TRIGGERS — TR

- An upcoming Olympic cycle (e.g., LA 2028 preparation)
- A poor medal result prompting analysis
- Media and public questions after major events
- Funding or policy decisions that need evidence

### 4. EMOTIONS: BEFORE / AFTER — EM

Before: confused, overwhelmed by scattered data, unsure where to invest

After: confident, informed, in control, making data-backed decisions

### 10. YOUR SOLUTION — SL

- An interactive analytics dashboard that cleans and combines historical Olympic data (athletes, countries, sports, medals, host cities) and presents it through easy visualisations.
- Users filter by year, country, sport and gender to see medal trends, country rankings, athlete age and physique patterns and sport-wise performance.
- Highlights strengths, gaps and predictive insights so coaches, federations, journalists and students can decide quickly without programming skills.
- Fits their behaviour of searching and comparing data online by putting everything in one place.

### 8.1 ONLINE CHANNELS OF BEHAVIOUR — CH

- Search engines, Olympics.com, Kaggle, Wikipedia
- Social media, sports blogs and analytics communities

### 8.2 OFFLINE CHANNELS — CH

- Coaching meetings and federation review sessions
- Sports conferences, workshops and classes
- Printed reports and newspapers

Extract online & offline CH of BE
