GLOBAL OLYMPIC SPORTS PERFORMANCE ANALYSIS
PHASE 8: Project Demonstration

Project theme: historical Olympic participation and medal performance.

Objective

Present the project goal, workflow, analytical outputs, and key observations in a clear and verifiable way.

Suggested presentation sequence

- Introduce the problem and project objectives.
- Show the dataset fields and describe the row-level unit.
- Explain cleaning and validation.
- Demonstrate medal summaries by NOC/team and sport.
- Show performance trends by year and season.
- Explain one or two insights supported by the charts.
- Discuss limitations and possible next steps.

Demonstration checklist

- Dataset file opens and the row/column structure is clear.
- All charts have titles, labels, and defined measures.
- At least one result is checked against the source data.
- The difference between participation rows and medal records is explained.
- File sizes and deliverables are ready for submission.
- The final conclusion is based on displayed evidence.

Example questions to answer

- Which NOCs/teams have the highest medal-record counts in the selected period?
- How do medal-record counts vary by sport?
- How has participation changed across Olympic editions?
- What patterns differ between Summer and Winter Games?
- What limitations must be considered before comparing eras?

Closing statement

The project provides a reproducible, transparent starting point for exploring Olympic sports performance. Results should be interpreted in the context of historical changes in events, teams, and participation.

Expected phase deliverable

Presentation-ready walkthrough and demonstration checklist.
