Performance Testing Phase
Snowflake

Date	01-11-2026
Team ID	EN25CS3011097
Project Name	Global Olympic Sports Performance Analysis

Performance Testing - Snowflake:

This template records how the Snowflake data layer behaves when loading and querying the Olympic dataset.

S.No.	Parameter	Values
1	Data rendered / loaded	8,988 rows x 56 columns loaded into OLYMPIC_DB.SPORTS.OLYMPIC_EVENTS (athletes 8,000; medal_results 910; alltime_country_rankings 60; games_summary 18)
2	Warehouse used	OLYMPIC_WH, size XSMALL, auto-suspend 60 seconds
3	Data preprocessing	File format CSV_FF (skip header, treat blanks as NULL); dataset_type filter in every query
4	Number of analysis queries	5 aggregate queries (total medals, gold/silver/bronze, athletes per sport, athletes per name, medal points) plus 1 load check
5	Query features used	GROUP BY, ORDER BY, LIMIT, SUM, COUNT(DISTINCT), WHERE on dataset_type
6	Result validation	All query results match the Tableau worksheets (e.g. United States 735 medals, Surfing 201 athletes, USA 1,443 medal points)
7	Query execution time	Record from Snowflake Query History for each query (team to enter)
8	Connection to Tableau	Snowflake connector with extract; dashboard refresh uses the table OLYMPIC_EVENTS

Test cases

Test ID	Scenario	Expected result	Status
SF-01	COPY INTO load	8,988 rows loaded without errors	Pass
SF-02	Count by dataset_type	8,000 / 910 / 60 / 18	Pass
SF-03	Top 10 countries by medals	United States 735, China 696, Russia 429	Pass
SF-04	Athletes per sport	Surfing 201, Canoe/Kayak 199, Handball 193	Pass
SF-05	Medal points ranking	United States 1,443, China 1,386	Pass
